

File Zilla Quick connection guide

Download and install FileZilla (<https://filezilla-project.org/download.php?type=client>), other FTP clients are available, but we've found Filezilla to work really well plus its free too!

Upon successful installation, open FileZilla.

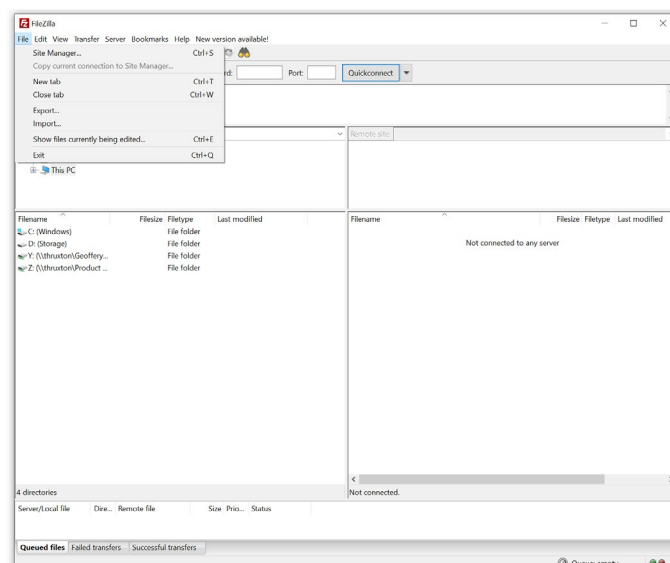

On the left and side, you'll see your computer, on the right will be a list of all the files on the FTP server you've connected to.

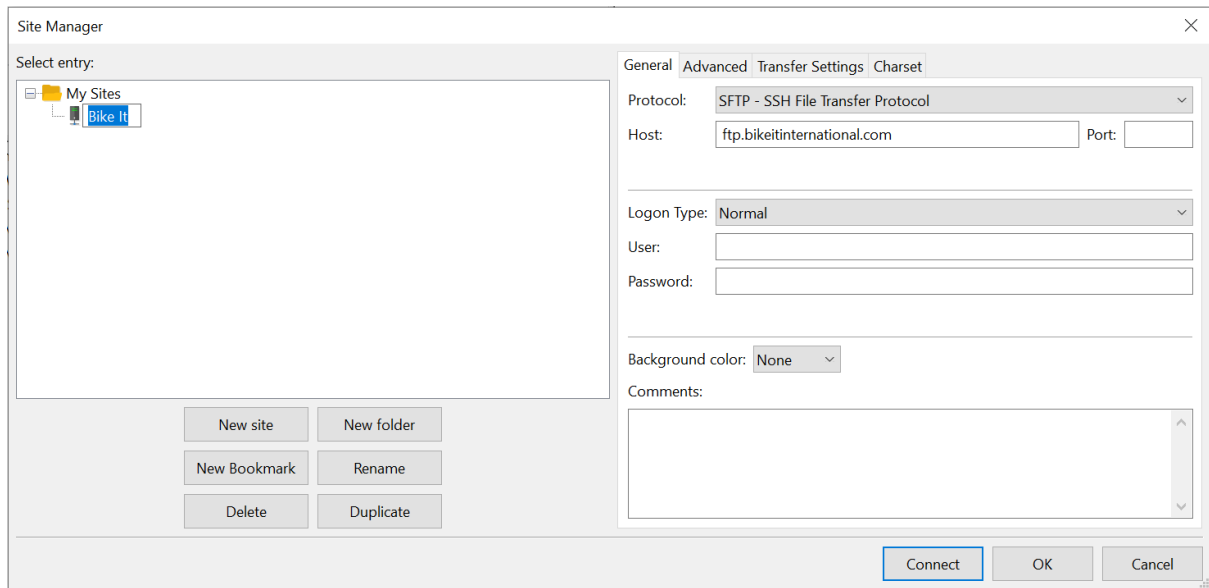

As you can see the right hand side is blank, as we've not input any connection details in yet.

Adding connection details

Click "File", top left and "Site Manager", a new window will open.

Select “New Site”, give it an appropriate name, then add your connection details on the right-hand side.

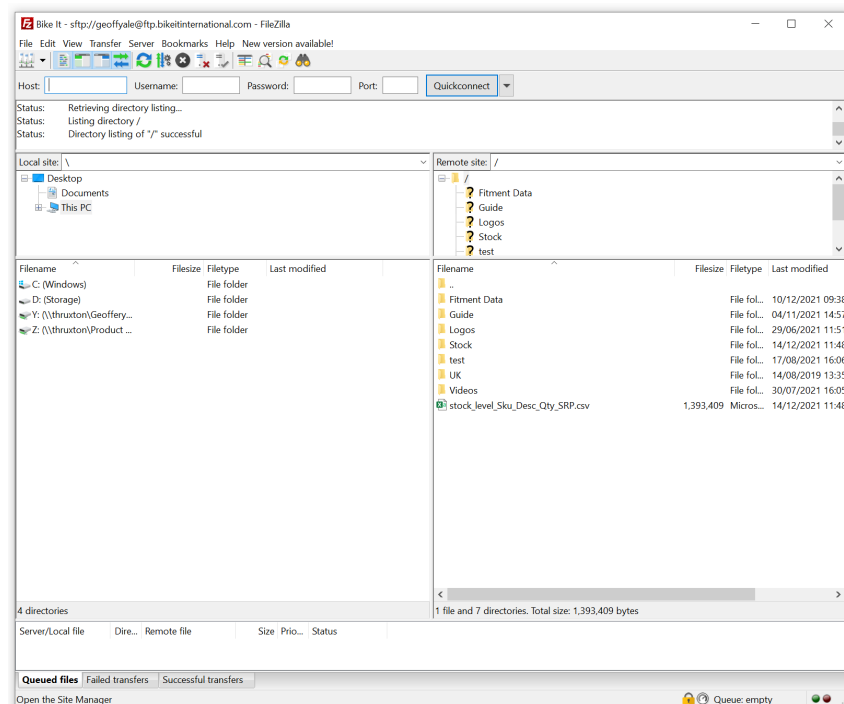

Make sure the protocol is set to “SFTP”

Hostname: ftp.bikeitinternational.com

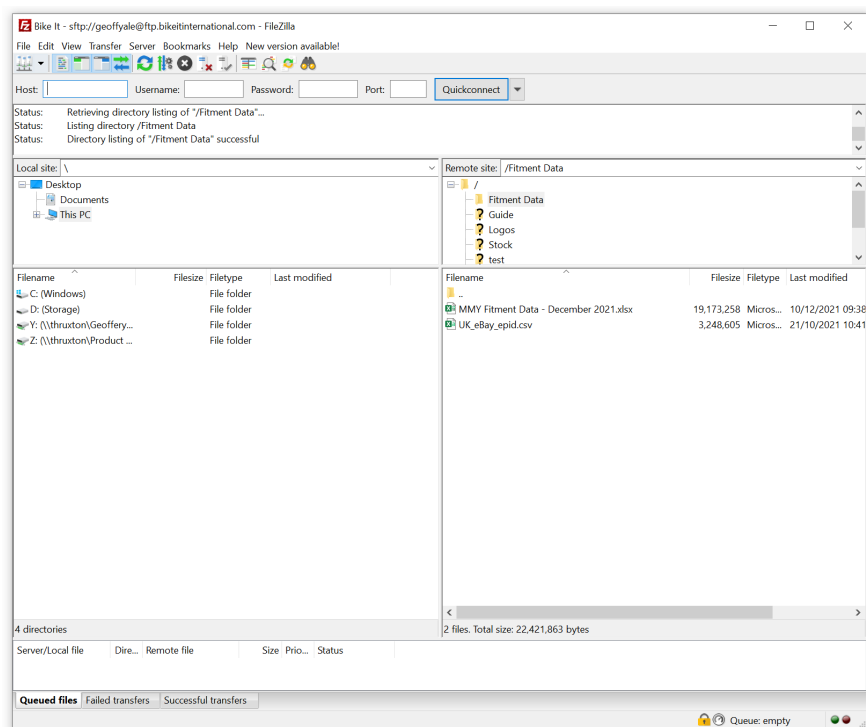

And Port is “22”

Then simply add your username and password as per the email and click “Connect”

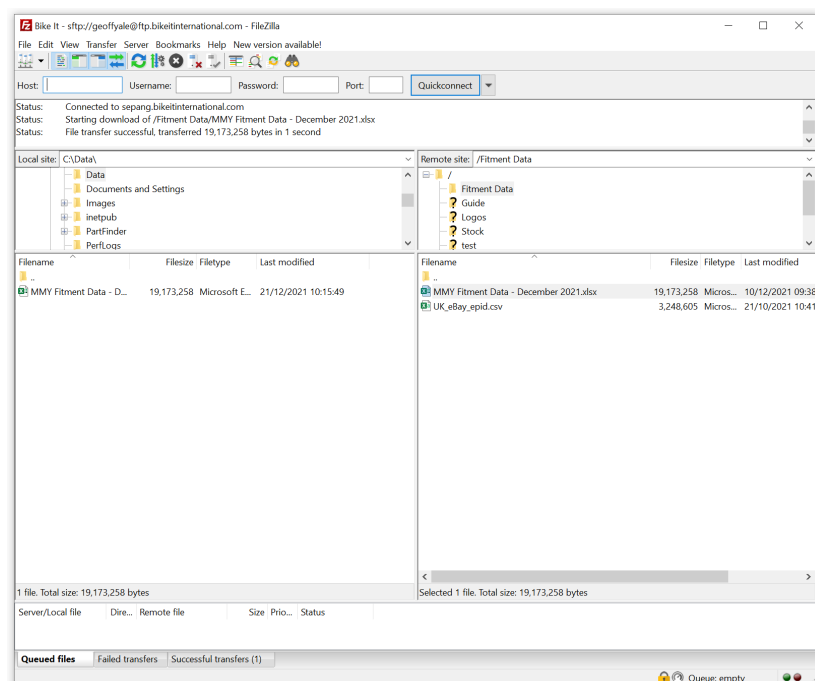

Upon successful connection, you’ll then be presented with a list of files and folders within the right-hand window, these are all the documents we share including stock level information, product data and fitment data.

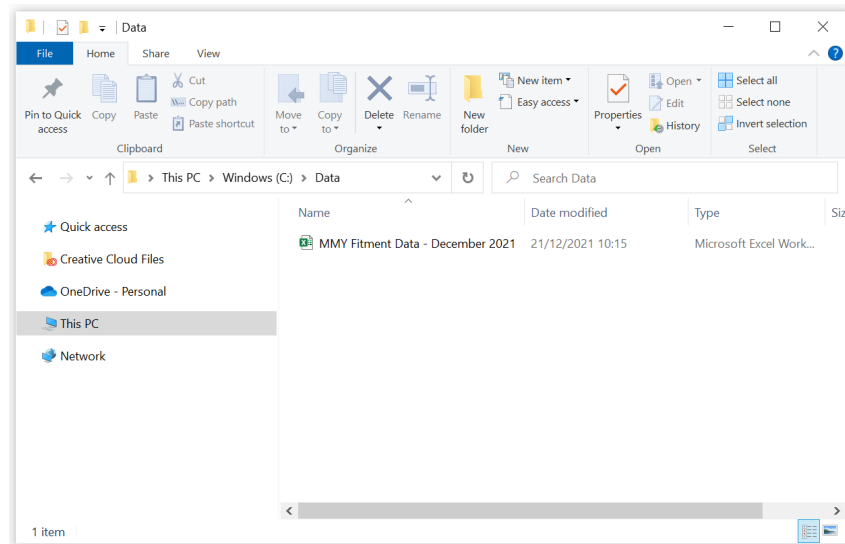

If you wanted to download the “Fitment data” for example, you can simply open the folder by double clicking on it

Then simply dragging the file(s) you want from the window on the right to the window on the left into a suitable directory on your computer. Double clicking on the file will also download the desired file.

You can then simply find your files on your computer, open and edit the file as you need / see fit to work with your systems.

Repeat this process for as many files as you need. There are files with comprehensive stock level information, updated every 2 hours. Product data including images, descriptions, pricing and detailed product fitment data too, showing you what fits what.

Should you have any questions or queries please do get in touch on support@bikeit.co.uk , we're really keen to help where we can help you get online with Bike It.
